

I use XM and it is great. I travel a lot for my work. I got tired of having to switch channels because of lost frequency. I drive across Louisiana and Arkansas. There are a lot of areas where radio reception is not very good. But XM provides me with great listening. I greatly enjoy the clarity of the XM channels. I pay for this service why should NAB have the power to limit what I can listen to. It not like XM Radio is taking way a lion share of the market. Most Americans still use the regular radio. Cable and Internet both give us weather information. Why not XM?

I feel it is unfair to take away the traffic and weather channels. What will the NAB try to take away next? Please do not let this injustice happen. You have the power to make a difference.

Thank you

Dennis
